

Laboratory Services,
Occupational Health Division,
200 Kent Street, Ottawa, Ontario.

December 7th, 1955.

Mr. Kurt Raht,
Senior Research Engineer,
The Consolidated Mining and
Smelting Company of Canada Limited,
Kimberley, B. C.

Dear Mr. Raht:

I have noticed a typographical error in my letter of
November 18th, 1955. The value for the arsenic put in Sample
1 should read 0.05, instead of 0.50. I am sorry this error
has occurred.

Would it be convenient for you to run these standard
samples, or other standard samples, sometime in the near future?
Have you any adverse comment to make about the method?

Results have just been received from Analyst 5 as follows:

Sample 1	--	0.050
Sample 2	--	0.49
Sample 3	--	1.02
Sample 4	--	1.49

Yours very truly,

J. L. Monkman.
