

Notes of Phone Call from Lionel Hunt

March 8/79

Advised that Pat Raleigh had to take a week trip to Calgary - brother sick.

Raleigh has signed secrecy agreement with Koppers & is being forwarded to D/S for signature.

Proces Koppers has increased use of ammonia & reduces requirement for water from 22 to 1.8 lbs per lb of arsenic.

Means can reduce need of whole plant - could possibly go to drum filtration. Cost of heating will also drop from 2.04¢/lb to 0.82¢ per lb/ars. Will also be able to reduce cooling tank sizes.

Ed Sanbathman may be able to supply the ammonia. - 1414

Overall process looks encouraging - should continue on pilot work.

What do Koppers expect from us? Situation is spec. They don't want to be cut off. They fell into the process by chance - not fully developed.

YH.
