

Phone Call from Watson

May 16/79

1. Deserve Pilot Plant among other things.
2. Right now analyzing product - plant is not running. Next week will be going to test Cottrell dust - see what insoluble cake is formed - will use centrifuge.
3. Then will go to processing where & Co. in following week.
4. & Co. forming are not happy but are handling well. Have about 24 lbs now will produce another 200 lbs in next two weeks. Purity is good - Hatch says 99.9% $\frac{.02\% \text{ Sb}}{.02\% \text{ Fe}}$
5. Are air freighting 700-800 lbs of bag house dust to firm in Pennsylvania to test three Alligatoin apparatus. After this test will write up report & get into equipment size.
6. Cooling Tank presently used in pilot run has outside cooling, agitation & seeding.
7. Looking for end of June - two students in lab are freeing up L. Corral more for test work on pilot plant - have gone about as far as they can go. Don't need another man.
