

Memorandum Meeting with M/R & LSP.  
re the plant

July 26 1975

Discussed Aerobic project - Pilot plant is being moved to same plant - more room will take two weeks - also ordering 4 paper agitators to corridor for forcing with present system. Will be end Sept. before finalized

At meeting = 4/6 - everyone agreed to plan sheet. (see attached) Involves two stages of leach & an actually tertiary clean-up of effluents.

Pilot plant work will be on treatment of Colwell dust in tertiary leach.

Accepted by vacuum - filter requirement changed substantially to the Laminar type (smaller filter). The second stage filtration will be by centrifuge.

May have to bring in outside consultant. Cost of project now <sup>is</sup> 1.0M, on plan - will also speak to fellows from Colwell who ran the old Delora plant.

Discussed Keyes Agreement - White conceptual or will sign anything but original. Re HSA agreement - still no progress.
