Notes of a Phone Call
To P. J. Raleigh
Re Arsenic Sales
September 28, 1979

Raleigh reported that there is a possibility of selling baghouse dust as is providing the quality is 95% or better. It would mean a net of \$.16 per pound at Giant for the full production or approximately \$800,000 per year.

Pickard feels that we cannot guarantee 95% as there are too many fluctuations.

Raleigh noted that they are able to get 95% or better baghouse product from Campbell Red Lake operation and feels we are smarter than they are. It would mean working on the Cottrell to ensure that the product is good and that there is no gold loss. He noted that Campbell Red Lake would be willing to help to the hilt and that trucking would be no problem as we could use the same people that handle their material.

He suggested that we send a sample of the 85% material to the Voluntary Marketing Agency to see if that would be acceptable.

We would not give up on the arsenic upgrading as there is a requirement for other markets to have a very pure material. We would also have to consider treating the Cottrell dust and underground material as well as the Con material, all of which have gold values which can be recovered especially with the high prices.
