Notes of a Meeting
Re Arsenic Plant
May 28, 1979

Present were: P. Zaharuk, L. S. Price, D. J. Emery

Zaharuk dropped by briefly to say that he still favours the thickener approach despite what others may be saying in favour of straight filtering. He feels this is the route to go especially for the current baghouse production, ie. "keep it simple", as Giant has a time constraint to consider re underground storage.

Later if we want to treat Con material or U/G storage, we can add in filtration units after the thickener to enable us to handle these by-products. In fact, thickener would be a big plus in their treatment. L. S. Price concurred in the above and his calculations show no problem solving water balances.

D. J. Emery
