

Phone Call from FET Pickard

June 1979

Frank called in response to my call earlier in the week.

Discussed the pilot plant project & noted requirement to get things moving or else we'll have to spend money for up storage.

Expressed my regrets that he hadn't been involved before the Feb meeting but hoped that all wounds were healed.

Felt he could help in getting a consensus so we could move ahead. Stressed need for metallurgists approval before we could expect OK from MTC & Directors.

Need for someone to supervise discussed (Forster?)
