Yellowknife, N.T. X1A 3S8

November 21, 1995

Dear Jim:

Re: Roaster Stack Air Dispersion Mechanical Feasibility Study

Royal Oak Mines Inc is committed to working together with your department to determine acceptable changes from both an economic and an environmental perspective that could be implemented to the emission control system.

Please find enclosed a copy of the Mechanical Feasibility Study submitted by Dillon Engineering. Also included are the results from the latest stack sampling test conducted in September 1995 by Entech.

I look forward to meeting with you to discuss the future use of the dispersion model and the monitoring of stack emissions.

Yours sincerely;

Erik Madsen
Superintendent Environmental Services
NWT Division

C.C. John Starch
