Air Pollution Control Section,  
Environment Canada,  
Room 1023, 10025 Jasper Avenue,  
EDMONTON, Alberta T5J 2X9.

Attention: Mr. H. Veldhuizen,  
Head.

Dear Mr. Veldhuizen:

This is to acknowledge your February 28th letter.

As per your request, we do not anticipate any problems in having you test your stack sampling procedure here in June provided you supply all equipment and personnel.

We would like to comply with the request that we undertake definitive stack sampling in July. Unfortunately though, we do not have the proper equipment. If you could make your equipment available to us on a rental basis, we will be pleased to do the tests provided staff is available. As you can appreciate most of our people like to take vacations in the summer and the school year contributes to our problem.

Accurate dustfall data is available from the Department of Health who under the direction of Mr. Grange, did this work some time ago. We feel it would be better for all concerned if you made use of their data since what little we did was very amateurish.

As regards your last point, an April familiarization tour is acceptable provided it takes place in the first week of April or after our water application hearing.

Yours truly,

GIANT YELLOWKNIFE MINES LIMITED.

H. E. Pawson,  
Mill Superintendent.
