Would like sample of max purity  
As<sub>2</sub>O<sub>3</sub> a.s.a.p. as baghouse  
dust.

Would Falconbridge be interested  
in additional refinement of As<sub>2</sub>O<sub>3</sub> to  
obtain 99% + purity as As<sub>2</sub>O<sub>3</sub>

Would be prepared to pay \$100-150  
per ton for v/high purity — considerably  
less for unrefined (if we found after  
analysis a commercial feasibility of refining  
it ourselves.)

In terms of annual tonnage we would  
be looking at something in the order of  
800-1000 tons with a potential of 2x3  
times that amount in the next 3 years.

Sample to be sent
