Mr. K. Raht  
Consolidated Mining and Smelting Co. Ltd.  
Sullivan Concentrator  
Chapman Camp, B. C.

Dear Mr. Raht:

Since the continuing survey of the arsenic situation at Yellowknife will probably require that dust samples be taken by our staff, it would be of interest for us to know by what methods such samples were taken by your personnel.

Also, we would appreciate knowing whether the efficiency of the collector was calculated from measurement of total particulate matter by weight, particle counts; arsenic content, or by other means.

Yours very truly,

Kingsley Kay  
Chief  
Industrial Health Laboratory
