Ottawa, Ontario,
October 19, 1951.

Dr. Seward Miller,
Chief, Industrial Hygiene Service,
U.S. Public Health Service,
Federal Security Agency,
Washington, D. C.

Dear Doctor Miller:

The Industrial Health Division is now handling several problems in air pollution. I believe you will recall the details which I gave you last May with regard to the serious arsenic case at Yellowknife.

Dr. Charron and I feel that the point has been reached where it would be extremely valuable for the officers concerned to have the advantage of consultation with Mr. George Clayton. We would be most appreciative if Mr. Clayton might be permitted to come to Ottawa for this purpose and possibly to speak before a number of other governmental officers on the air pollution situation in your country. Would you be disposed to facilitating such a visit at our expense to help us with this difficult problem which is now gaining momentum in Canada? Thursday and Friday, November 15 and 16 would be desirable dates if the visit could be authorized.

Yours sincerely,

Kingsley Kay, M.A., Ph.D.,
Chief,
Industrial Health Laboratory.
