

Jackson Building,
Ottawa, Ontario

March 27, 1952.

Mr. N. Archdale, B. A.,
Principal Yellowknife High School,
YELLOWKNIFE, Northwest Territories.

Dear Mr. Archdale:

Our Laboratory has asked me to write you once again in connection with the urinary samples. Apparently, the quantity in each sample is insufficient for adequate analysis. The amount of arsenic found on analysis is extremely small and a small quantity just does not give the required results.

I would be greatly obliged if you would ask Mr. Lecuyer to try in every case to have the bottle completely full. I would also be very grateful personally if you could drop me an advance note when you see signs of breakup coming on as I am expected to return to Yellowknife just after that time and I have many other commitments which will require to be fitted into the program.

Looking forward to seeing you soon. Kindest regards.

Yours sincerely,

D. L. Henderson, M.B., Ch.M., D.P.H.,
Industrial Health Division.

P.S.

The purpose of my return visit is to hold another examination of the school children for comparison with the earlier examination.
