DISTRIBUTION

**Minutes of Meeting**  
**Giant Mine Atmospheric Emissions - 10 March 1994**

Please find attached final minutes which have been prepared following our discussions on Royal Oak Giant Yellowknife Mine's roaster stack emissions.

Jim Sparling will contact Kevin Weston in the near future to follow up on our discussions regarding daily sulphur dioxide emission mass balance calculations. As well, this Division will prepare brief summaries of the ambient air monitoring undertaken for sulphur dioxide in Yellowknife and provide these to mine officials on a regular three month basis.

I will advise mine officials when the proposed air quality guideline is adopted. At that time, I would suggest that further discussions be scheduled so that we can consider actions which must then be taken to address sulphur dioxide concentrations in the vicinity of the mine.

Emery Paquin  
Director  
Environmental Protection Division
