

Meeting with Con - May 3, 1979

Re: As Upgrading

Present: J. Gowans; D. MacPhail; R. Douglas; J. Henry
D.J. Emery; P. Zaharuk; K. Morton; P. Raleigh; W.A. Moore

Discussed pilot plant progress. Said test work should be completed by June 30, 1979.

Discussed storage capability at Giant for Con's material. They have to order a truck.

Con said they might be able to deliver material at 50% solids. Pat mentioned pumping a conc. in Norway at 76% solids. Peter Zaharuk favours a marconis flo (?) pump.

Pat siad still looking at producing 6000 tons pure As_2O_3 (50% from Con, 50% from Giant).

Giant would have a vehicle ("Super-Sucker"?) for cleaning up spills.

Giant would not operate during freeze-up and break-up.

Write Water Board re more definite proposal. (Bill Moore)

9,800 tons As_2O_3 (Con's) total.

Giant - asked if Cominco had any information or lab work on As_2O_3 upgrading available to Giant.

Cominco's expert to be contacted to see if he can help.

Submission to Water Board is needed soon.

W.A. Moore
