

Phone Call to P. Halsey  
from Lake Tahoe 525-5591

July 21/80

- Discussed Arsenic load-out - full sized tank. \$212,000 - site work \$48,000, total \$260,000. Technically cutting corners but not serious. Outlay should be within guidelines.
- Hoppers fellow did a visit
- Cement silo would have been OK - but wanted for lime use - Also wouldn't have been acceptable to working people to have Arsenic storage there - feels management's view on this would have gotten over to the workers.
- Fed matrix was in for a few days - next pond by Alcatraz.
- Treatment of mill/tailings effluent - could be a show piece - \$1 1/4 million - couldn't cut back too much - stuff would be cleaned. Could have been 1/2 size if we had looked at tailings.
- HSA - nothing new
- Can - told them about peeling weeds & not all that been on pond unless favorable rate of return.
