

Notes of a meeting re: arsenic upgrading, held in Toronto
February , 1980, from 2:30 p.m. Present were: T. J. Desanti,
D. Zeraldo, F. G. T. Pickard, L. Price, R. J. Raleigh, W. A. Moore,
DEK

We held the meeting to explain the present research situation with regard to arsenic upgrading to the marketing group. They are getting very concerned about continued delays and what to tell the people that are looking for supply.

They advised us that off-spec material must be handled in some way and not shipped.

We noted that in any contract on the sale of arsenic, we would want to get the sludge back. There were still prices and tonnage to be settled in the agreement.

We discussed the fuming tests at Thornhill that should take about six weeks. It was suggested that we could pilot plant by the fall.

The marketing group again stressed for a date on the availability of product.
