Subject DUST CONTROL

Due to excessive arsenic dust concentrations in the Cottrell Plant lunchroom, certain changes will be necessary. A pressurized lunchroom with an air lock is presently in the planning stage and work will begin shortly, however any benefit to be gained from this will be negated if the present practice of wearing dirty coveralls in the lunchroom is continued.

Operators must remove dirty coveralls before entering the lunchroom and should make every effort to wash up before meals.

A sink will be provided in the air lock for this purpose.
