Message:

I have been trying to call you but cannot get
thru.

Regarding your letter of June 4th we would be
able to provide the complete system including
the design and fan. We would of course need
complete detailed information about the existing
equipment and the results of your pilot testing.

Have you started testing yet? We are still
in the process of making up other test elements
with another model we would like to test. They
should be complete in another week or two.

I would like to visit you in early July to
see the testing, discuss the project and get the
final design parameters. Let us discuss
this when the phone work

Regards
