April 21, 1999

Attention: Steven Schultz
Environment Officer

Dear Steven,

Enviro-Mining Incorporated 1995 is committed to the development and application of innovative technologies to eliminate waste from the environment, improve operating conditions for workers, and to provide desirable alternatives to the continued use of harmful products and processes in the mining industry. Over the past four years, we have accumulated a number of proven technologies to address a variety of environmental issues faced by mines.

As per our discussion of April 19, 1999, Enviro-Mining Inc. has a proprietary technology for the treatment of arsenic trioxide. Our process can be done on site to eliminate the cost of moving the material to the surface.

This process is proven, and well documented. We would charge a project fee as opposed to a per tonne rate. We operate based on performance and results.

We would appreciate a 10 Kg sample be sent to our Canadian lab to demonstrate that our process can effectively deal with this material. The results of the test would be disclosed to your people within a two week period.

If you could please give us a call in the coming days, as we are doing several samples next week.

We believe this process will provide a solution that will be a benefit to your Corporation, and settle the issue for the local community. This will also assist in solving a problem which will then allow for new mine owners to come to the table, and alleviate any concerns of the mine being shut down.

Again, this is not an upgrading of the arsenic, nor a short term stabilization process.

I look forward to your response.

Sincerely,

Harold Jahn
President, Enviro-Mining Inc.

Cc: Lew Mansell, Vice President
