

Notes of a Phone Call  
To P.J. Raleigh  
Re Koppers  
December 8, 1978

We discussed the proposed draft letter. I asked if a lawyer would be looking at it before we send it out to which he replied that Matthews would handle it. Under Clause 5b(2) the out of pocket cash might involve reagent costs for improving the quality of our product ie.  $H_2O_2$ .

Under Clause 5b(3) Raleigh mentioned that Koppers had been talking to Trimac for direct truck haul to Georgia. The Koppers liability has to be determined. I asked if he had mentioned piggy-back and he replied not as yet.

PJR noted that he had talked to George Espley about the possibility of recovering crown pillars over arsenic storage stopes if it is true that the arsenic is in a frozen state. Espley and Raleigh consider that a seal could be made with cemented back-fill about 15 feet thick. There may be some trouble from the environmentalists as to whether this would be sufficient.

Raleigh has also called Hank Gigerich and is writing him sort of a promotional letter concerning the Con arsenic. Hank seemed to be quite enthusiastic about our approach which is an aqueous solution. They had been looking at fuming arsenic and this is where they expected to run into environmental problems.

D. J. Emery
