U.S.A.

Attention: Mr. J.D. Hite  
Vice President and General Manager  
Specialty Wood Chemicals Division

Dear John,

Thanks for the additional information on the Koppers Organization. It should be of some help to us in understanding the areas in which you will be able to apply the products resulting from the processing of the arsenic.

We hope the arrangements for the larger test sample are going along satisfactorily. One thing that is apparent from our review of the arsenic handled and stored at Giant over the last 20 years, is that the quality of  $As_2O_3$  stored has been improving, while the gold content has been decreasing and is now below .1 oz/Ton. Both these should make for a more satisfactory product for you to handle and treat.

The information on Koppers public education releases should come in handy, if we are to alleviate any public concern when we start shipping the product. We would appreciate it, if you could assist us in making a contact with the people who can help us get the basic data.

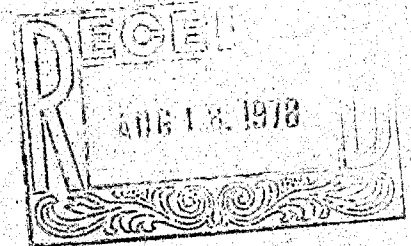

Yours very truly,

FALCONBRIDGE NICKEL MINES LIMITED
