Re: Source Emission Survey - Gold Roaster Stack
Entech File Number 7640/9801

The attached report presents the results of the source emission survey conducted by Entech Environmental Services Ltd., on September 22-23, 1998.

At this time, testing was performed on the Gold Roaster Stack to determine the concentrations and emission rates of arsenic and sulphur dioxide.

A total of three tests were completed with the results indicating the following :

	Average	Maximum	Minimum
Arsenic			
- mg/m3 dry at Ref.	2.95	4.54	1.94
- kg/h	0.145	0.224	0.102
Sulphur Dioxide			
- g/m3 dry at Ref.	33.59	35.56	32.20
- kg/h	1660.5	1757.0	1499.8

* ref - 25 C and 760 mm Hg.

Should you have any questions concerning the results or if we may be of further assistance, please contact us at your earliest convenience.

Yours Truly

Table of Contents

Introduction

Entech Environmental Services Ltd., working on behalf of Royal Oak Mines, conducted a compliance source emission survey at the Royal Oak Mines, N.W.T. Division, on September 22-23, 1998. The purpose of the survey was to determine the concentrations and emission rates of arsenic and sulphur dioxide from the Gold Roaster Stack.

Discussion

The compliance source emission survey consisted of three tests, during each of which the following flue gas parameters were determined:

- flue gas water concentration,
- flue gas composition and molecular weight,
- velocity profiles, temperature and static pressure,
- arsenic concentration and
- sulphur dioxide concentration.

There were no problems reported during the collection of the samples or during the subsequent analysis.

Calculations and Results

The results of the test program are summarized on table 1 and detailed in the appendices.
In all, three appendices are attached which provide the detailed computer output, copies of the field data sheets and point by point isokinetics results.

Methods and Procedures

Sampling and analysis were conducted as follows;

- water determination.....EPS 1/RM/8
- flue gas composition and molecular weight.....EPS 1/RM/8
- velocity profiles, temperature and static.....EPS 1/RM/8
- arsenic determination.....EPS 1-AP-79-1
- sulphur dioxide determination.....EPS 1-AP-74-3

ROASTER CONTROL QUEST — September 23/98

Reaction Equations

No. 1 $2FeAsS + 5O2 \Rightarrow Fe2O3 + As2O3 + 2SO2$
Arsenopyrite — Hematite and Arsenic Trioxide

No. 2 $2FeAsS + 6O2 \Rightarrow 2FeAsO4 + 2SO2$
Scorodite

No. 3 $2Sb2S3 + 9O2 \Rightarrow 2Sb2O3 + 6SO2$
Stibnite — Antimony Trioxide

No. 4 $2FeS2 + 5.5O2 \Rightarrow Fe2O3 + 4SO2$
Pyrite

No. 5 $2SO2(g) + O2(g) \Rightarrow 2SO3(g)$

CALCULATION OF QUENCH AIR TO BAGHOUSE

Heat Content of Gases at Cottrell Outlet @ 554.55 Deg F 563.5 Deg K 290.3 Deg C

(ASSUME NO LEAKAGE)

	NCF	lb Mols	BTU/lb Mol	BTU/Day
N2	5.766E+07	160,617	3,725	598,301,662
SO2	6.087E+06	16,956	5,462	92,626,642
O2	5.235E+06	14,582	3,837	55,956,576
As2O3	4.007E+05	1,116	11,235	12,539,227
Tempering Air	3.824E+07	106,519	3,708	395,024,942
H2O	3.772E+07	105,064	4,353	4.574E+08
Total Gas	1.453E+08	404,855	3,981	1.612E+09
Inerts : Scorodite		147.72		
Quartz		525.81	7,139	3,753,836
Sb2O3		21.49	13,719	294,755
Total Inerts		695.02	5,818	4,043,591
Combined Total		405,550	3,984	1.62E+09 BTU/Mo.

The Baghouse Inlet Gases include the Quench Air and this air is at 199.33 Deg F 366.1 Deg K 93.0 Deg C

However, excluding the Quench Air the remaining gases and inerts carry:

	lb Mols	BTU/lb Mol	BTU/Month
N2	160,617	1,170	187,911,738
SO2	16,956	1,625	27,554,158
O2	14,582	1,205	17,575,403
H2O	105,064	1,343	141,126,261
Tempering Air	106,519	1,167	124,278,568
Total Gas	403,739	1,235	498,446,668 BTU/Mo.

Inerts :				
Scorodite	*147.72*			
Quartz	*525.81*	*2,061*	*1,083,537*	
Sb2O3	*21.49*	*4,111*	*88,321*	
Arsenic Trioxide	*1116.10*	*4,000*	*4,464,419*	
Total Inerts	*1811.12*	*3,112*	*5,636,277*	*BTU/Mo.*
Combined Total	*405,550*	*1,243*	*504,082,345*	*BTU/Mo.*

Heat in must equal heat out. Therefore, the Quench Air must carry ;

1.616E+09 less 5.041E+08 equals 1.112E+09 BTU/Day

The Heat Capacity of air at this temp is : 1,167 BTU/lb Mol † is valid only down to 32 Deg F

Average Outside Air Temperature is : 49.17 Deg F

Extra Heat to Heat air to 32 Deg F 0.0 BTU/lb Mol

Total Heat to Quench Air 1,166.7 BTU/lb Mol

Quantity of Quench Air

1,111,769,793 divided by 1,167 equals 952,901 lb Mol/Mo

Volume of Quench Air

359/ Operating Minutes x 952900.8 x ((460 + 60)/(460 + 32)) = 17,979.2 SCFM

Volume of Baghouse Inlet Gases

ROASTER CONTROL QUEST — September 22/98

Reaction Equations

No. 1 $2FeAsS + 5O2 \Rightarrow Fe2O3 + As2O3 + 2SO2$
Arsenopyrite → Hematite and Arsenic Trioxide

No. 2 $2FeAsS + 6O2 \Rightarrow 2FeAsO4 + 2SO2$
→ Scorodite

No. 3 $2Sb2S3 + 9O2 \Rightarrow 2Sb2O3 + 6SO2$
Stibnite → Antimony Trioxide

No. 4 $2FeS2 + 5.5O2 \Rightarrow Fe2O3 + 4SO2$
Pyrite

No. 5 $2SO2(g) + O2(g) \Rightarrow 2SO3(g)$
