Subject: Blythe Shipment

1. Further our telephone conversation yesterday. Blythe confirmed today that the 9 ST contained in the container to be shipped this week will be adequate for now. They will request more later if required.
2. Also advised Blythe we would ship any small samples which may be available from U/G stope sampling programme a few years ago. These samples to be identified and shipped in separate bags inside the drums. If no samples are available, I would recommend you provide any analyses you have for the U/G samples.
3. The 2 kg sample of current production which you sent will arrive London tomorrow.
