Dear Sir:

Re: Arsenic Trioxide Digested in Ammonia Liquor

Two samples are being sent under separate cover. Both samples are arsenic trioxide digested in ammonia liquor. One sample has soluble arsenic fixed with lime and the other with lime and ferric chloride.

Please conduct testwork as per my letter of July 2, 1986 on a similar subject. Also, in addition please determine the soluble arsenic and maintain cyanide strength during leaching. The old purchase order 34846 remains in force.

If you have any queries please contact Rob Raponi, Environmental Technologist.

Yours very truly,

GIANT YELLOWKNIFE MINES LIMITED
