MEMORANDUM

To K. Morton

Date May 29, 1980

Copies To W. A. Moore

Ref.

From L. J. Connell

Subject Arsenic Trioxide Loadout Facility.

Gerry Derka provided me with the following additions to the F.M.C. quotation for an arsenic trioxide loadout facility;

- |   |               |
|---|---------------|
| 1. Original F.M.C. quotation  | \$ 269,950.00 |
| 2. Installation of a larger baghouse to provide an air to cloth ratio of 1:1<br>F.M.C., American Air Filter & Koppers<br>all feel that we do not require the larger baghouse. | 35,000.00     |
| 3. Slide gate between bin hopper and sampler  | 3,500.00      |
| 4. Air pads, compressor, air filter, dryer and associated equipment   | 26,500.00     |
| 5. Lighting   | 12,000.00     |
| 6. Painting of interior bin surfaces with an acid resistant paint.  | 13,300.00     |

---

New Price \$ 360,250.00

If we stay with the smaller baghouse (Air/cloth ratio of 5.6/1) the new price becomes -

\$ 325,250.00

If we hold off installing the air pads assuming the bin won't bridge a further saving of around \$ 26,500.00 would be realized.

These air pads could be added at a later date.

New Price \$ 298,750.00
