From W.A. Moore

Subject

1. Distance baghouse to cement silo - 550 feet.
2. Size of concrete silo 6100 cubic feet - good for 12 days production.
Will mean more vehicles for trucker since less inventory as cushion.
3. Cannot understand why 5.6/1 ratio for outside baghouse is not adequate.
4. Haven't seen anything in the way of a quote from Sprout Waldron, or a quote from a tank fabricator and an erector.

Have quote from Alberta Mequipco for 3500 cubic foot silo, plus mixing tank, small baghouse, vibrator, valves and structural supports for \$80,000.

5. We (Kent included) are negotiating June 9th to 11th so cannot spare him now. Suggest we get all quotes and specifications together first.
