

Kent:

let's get to work

August 14th, 1980

Notes of a Phone Call From P. J. Raleigh,  
August 12th, 1980

He phoned to say that they are getting a lot of pressure from U.S. buyers for purchase of raw arsenic. Price is getting in the range of 35 - 40 cents per pound or \$900 per ton.

He stated that we should get to work on determining whether we can recover arsenic from underground as there is a lot of money to be made and in fact there is more gold contained in the arsenic there than in one of the new properties Falconbridge is planning to bring into production (Opaweeke).

He also stated that they need another 25 pound sample of Con material at the Thornhill lab attention Manager R. Bergman. He asked if maybe Kent could send it down.

I stated that I would be down in early September and that Bill Moore would likely be coming down for the Directors meeting. We should get together and talk about it at that time.
