Stu Reid called D Billing re meeting with EPS Task Force in Ottawa today to discuss Campbell's latest stack test results. Stu told Dan that EPS is going to propose an arsenic emission standard of 15 grains per std cu ft. Dan wants to know if we could meet this on a regular basis. If not, he will try to get John Parker to arrange a meeting on a higher level. From our last results in Oct and Nov, we were doing better. .0015 grains/scf would mean 83 lbs/day. What do you say?
