Dear Sirs:

Re: Giant Yellowknife Mines Limited
Application for Miscellaneous Lease

Giant Mines intends to build a bulk material handling facility for the purpose of transferring a granular bulk arsenic trioxide product from truck trailers to railcars. The facility will include a rail spur, a transfer building, transfer equipment and an access road from the highway.

The facility will be capable of transferring product at the rate of approximately 20 tph using pneumatic conveying equipment and will have storage capacity of approximately 100 tons. It will be equipped with the latest in dust control equipment and will be manned by personnel fully trained in operating and maintenance procedures appropriate to the safe handling of this toxic product.

Volume of material handled is initially expected to be approximately 20 tons per day increasing 5% per year to a maximum of 50 tons per day. Volume of rail traffic will start at two 80 ton covered hopper cars per week.

The preferred location for the facility, as indicated on the attached map, is near the settlement of Indian Cabins, being the nearest point to Giant Mines suitable for this facility, given the requirement for enough space between the highway and the railway line to construct a rail siding, etc.. Uncertainties as to Native Land Claims in the NWT have prompted us to make application for a suitable site in Alberta rather than in the NWT.

Though detailed planning has not yet been completed, it is possible that we will want to begin construction of this facility during the summer of 1988, to be in operation early in 1989. The project is a long term one, approximately 20 years, and we suggest a 10 year lease agreement with a renewal option for an additional 10 year period.

Should you require additional information regarding this application, please contact the undersigned at your convenience.

Thank you.

Yours truly,

GIANT YELLOWKNIFE MINES LIMITED
