RE:	

Dear Eric:

It was good to talk with you today about the arsenical residues that you have accumulated at your mine site.

HULL & CO. seeks a residue that can be successfully and economically processed in a process we are working with. We expect to process residues, recover arsenic trioxide plus the metal values contained therein. I understand that you may be interested in processing your residue and this may give us a common goal.

For me to pursue this idea further, I need an estimate from you of the metals content of your residue or typical assays that we can use in our evaluation. If these assays look promising, our next step would be to ask for a sample and to discuss what mutual interests we may have down the road.

I look forward to talking with you.

Sincerely,

HULL & CO.

R. M. (Pete) Hull
