Mr. W. Moore
Mine Manager
Giant Yellowknife Mines Ltd.
YELLOWKNIFE, N.W.T.

Dear Mr. Moore:

RE: Solidification Testwork by D. Kaofchek

Further to our telephone conversation of today, this will confirm my request for the following information and sample.

1. Analysis of calcine leach residue (or roaster calcine if residue analysis are not available).
2. Analysis of carbon plant boron sludge (or Cottall dust if sludge analysis are not available).
3. Analysis of flotation tailings.
4. Approx. 15-20 lbs. of flotation tailings in filter cake form. This is possibly used by D. Krofchek as a source of silica in his testwork.

The above requested analysis should be for the major components and should include at least As, Fe, SiO₂, S, CaO, and MgO.

If the analysis aren't readily available don't go to a lot of trouble to get them. I could have Krofchek do them but I am trying to expedite the work as quickly as possible.

Thank you for your further attention to this request.

Yours very truly,

J.S. Scott

JSS/sd
